

# Better Breathing Bangladesh boosts respiratory health

The IPCRG and its Bangladesh group have teamed up with the UK's Education for Health and others to implement this WHO-GARD approved respiratory health programme. Training on the treatment of asthma and the use of inhalers has already benefited 100 primary care doctors, 200 nurses and 25 pharmacists. Local media have recently been approached to help publicise the programme. Click [here](#) for more information.
